## ALFABLOC® WALL SYSTEM

Alfabloc® is the only 'A' shape, interconnecting freestanding precast concrete wall system on the market. Its patented jointed mechanism aids in the spread of the load horizontally against the units. It is designed to be freestanding for the majority of uses, but can also be ground fixed for higher loading applications.

Some examples of where Alfabloc® wall systems can be utilized include:

- Construction Materials
- Agricultural Products
- Waste Facilities
- Recycling Plants
- Landscaping Products
- Security Walls
- Ports & Shipping
- Hazardous Protection
- Ballistic Protection

Seven important advantages unique to Alfabloc® compared to any other traditional walling on the market today:

- 1. Easy Installation** - no other wall system can be installed as quickly.
- 2. No Protruding Toe** - no extra area to get caught on, allows for easy cleaning and unloading.
- 3. Freestanding** - no ground fixing required but option is available for higher loading applications. Can be loaded from one side only or both sides.
- 4. User Friendly** - minimal resources required for simple install or reconfiguration.
- 5. Bay Configuration** - can be changed in minutes.
- 6. Interlocking** - system interlocks to form a solid wall.
- 7. Treaded Inserts** - hardware is cast into Alfabloc® for connecting or lifting.

The only **interconnecting, freestanding wall** on the market that is fully **customizable** to meet your project requirements.

Alfabloc® has been tried and tested over many years of constant use to withstand significant impact and withstand extreme weather conditions.

Height	3050mm	3650mm	4050mm	4600mm	5000mm	6000mm
